

Overview:

The team at LCO-France have a broad awareness of Information technology and electronic engineering plus a valuable understanding of network topology, all of which has been gleaned from years of hands-on experience.

Advocates of GNU/Linux (the FREE and Open Source system (fast taking the world by storm), their work is always to generic standards, that is to say, they build websites that will work happily on any browser platform and create networks and server systems that can accommodate all other computer operating systems.

LCO-France created websites are optimised not only for speed of delivery, but most importantly for high positioning in search engines.

The Cybercafe at LCO-France is available for the local community to use. Assistance is offered in desktop use of the GNU/Linux system, and of course in use of the Internet, email and Open Office on request.

Services Offered:

- Assembly, upgrade and repair of computer hardware. GNU/Linux system configuration.
- Creation of Internet sites for local associations and business.
- Design of dynamic websites that allow the owner to instantly update the text content on their site.
- Creation of interactive portal and blog websites.
- Translation of existing french websites into english.
- Build and configuration of Networks for personal, educational, small business and organisational use.
- Build and installation and configuration of Educational, Cybercafe, or Kiosk web facilities on request.

Custom Built Computer Systems

We can build and supply pre-installed with the Linux distribution of your choice and ready to roll GNU/Linux systems to meet your personal requirements.

Contact us to discuss your specifications and we can advise on the best available options to meet your budget.

The LCO Educational Computer System

For those aged 2-10 years, our fully open source work station systems allow one child or groups of children to gain valuable keyboard skills while at the same time, sharpening their competitive and team skills and providing the ability to learn about letters and words, calculations and general knowledge, through simple games, tests, puzzles and memory training.

The system provides teachers with statistics and information about each child's progress and is ready to plug-in and go.

Networks for Home and Office

We can build a networked GNU/Linux system using existing hardware that you may have, so as to allow multiple persons to access their own personal desktop and the internet at the same time. Just let us know your needs and we will be happy to advise on the most suitable options available.
